

MINERALIS GU/ZN

CLINICALLY PROVEN, SMOOTH ASTRINGENT

Zinc is an exceptional trace element found in skin cells.

Zinc is necessary for keratogenesis.

In addition to its own astringent and antiseptic properties, it is the cofactor of enzymes involved in the synthesis of nucleic acids and proteins.

PROPERTIES

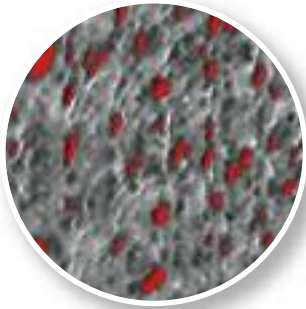

- Zinc gluconate tightens pores thanks to its astringent properties
- Zinc is commonly used as sebo-regulator agent
- Zinc gluconate is used in anti-acneic preparations
- Zinc gluconate is a strong anti-aging substance by stimulating the renewal of the collagen matrix
